Our Concerns on Proposed Groundwater Development Project

We farm north and west of Delta, Millard County Utah. We own and lease approximately 1700 acres of flood irrigated cropland. We live in a desert and know that water is vital to the production of our alfalfa hay, corn and grains. We want our son who is 4 years old to have the option of choosing agriculture as a profession. How far reaching will the impact of this pipeline be?

Our number one question concerning the Southern Nevada Water Project is: If there is enough water for this project, *'Where is it going today'? Where did it go 10 years ago? Where did it go 100 years ago? 1000 years ago?*

Thank you for your consideration.
